

Installing DLC Files

Currently, to install any DLCs you get, you just have to copy them to the same directory as the main content.

For example, on my PC, if I am given a file called "pakchunk1-Windows.pak", that would be my DLC file, and I would put it in this folder:

"[Path to StreamChamber]\V1.15\Windows\StreamChamber\Content\Paks", where you would find any other DLCs you copied in, as well as the base "pak", called **"pakchunk0-Windows.pak"**.
