

Running the Stream Chamber For the First Time

Currently, you download a ZIP file containing the latest version from your user page on the main website.

To get set up afterwards, follow these steps:

1. Unzip the "StreamChamber.zip" file where you want to keep it
2. Navigate to "[Your Folder]/V1.XX/Windows" and run the Shortcut, this starts up the Stream Chamber *and* the webserver powering the web app and websockets
3. You will now be presented with a menu asking for your username and your license key
4. Next will be a pop up asking where to put your CSVs, which contain all the information for your teams, players, squads, and sponsors
 1. As well, if you have custom image sequences or videos as part of DLC, they would go here in their own folder underneath the folder you just selected. For example "[Your CSV Folder]/CustomContent/" and then in there would be any image sequences or videos that need it.
 2. Regular image and video scenes are fine with just the file path in the conductor.
5. To launch the web app on the same PC, go [here](#) or to <http://localhost:30000> in your address bar.

You should now be all set up and ready to move on to the section about what each panel does!
